Dynamis PRC Team

Dynamis PRC is the Formula Student team of the Politecnico di Milano. It is made up of more than 100 university students who, every year, with dedication and passion design and build a racing car prototype. After years of sacrifice and hard work, the single-seater competes in one of the major competitions for open-wheel cars: the Formula Student. The racing department aims to teach students important hard and soft skills, not only in order to apply the knowledge acquired during the course of study, but also to develop various fundamental transversal skills in a working context, such as: team working, interpersonal skills and pressure, time and people management. Dynamis PRC is currently in fourth position in the world ranking (first in Italy) of Formula Student Combustion. After 15 years in the Combustion category, in 2020 the team decided to undertake a new and important challenge: to design and build the first electric prototype by Dynamis PRC, in order to compete in the Electric class of the Formula Student championship.
